

(a) Proportion of the 150 most discriminative words for women per category

(b) Proportion of the N most discriminative words for women per category

Figure 8: **Lexical Bias:** The proportion of the 150 most discriminative words of articles about women that belong to different categories. In all language editions between 32% and 23% of the 150 most indicative words for women belong to one of the three categories, while only between 0% and 4% of the most discriminative words for men belong to one of these categories. In some language edition, like the Russian (RU), the English (EN) and the German (DE) one, the proportion of the most discriminative words that belong to one of these three categories is especially high among the top words.
